MC Village Life

Updated Dec 12th 2025

Product Overview

Thank you for purchasing a MoCap Central animation pack! We take pride in capturing and processing our data to the highest quality by adding details such as finger motion and ensuring smooth start/end poses. All clips use the Unity Mecanim Humanoid system so the animations play back on any Unity Humanoid compatible character.

MC Unity Character

The **rig_MCUnity** character contains a Unity compatible skeleton with fingers, eye and jaw bones. Its Rig > Animation Type is set to Humanoid.

Demo Scenes

The package includes a demo scene **Scene_Demo_MAIN** file to review the animation clips. You can also view the animated objects such as the chair being moved by the character.

Demo Animation Controllers

Each animation set has a demo animation controller so during runtime you can right-click on a state in the Animator window and select **Jump to State** to see it play on the MC Unity character.

Props

There are many prop object prefabs in this pack. Most props are attached to the weapon_l (left hand) or weapon_r (right hand) bones on the rig_MCUnity prefab. These weapon bones have animation data which is applied using the included mask_rig_MCUnity.

Objects

There are many low-poly objects that are used as templates in this pack such as a bed or bath. Some of these objects have animations such as the Pillory or Logs, these can be seen animating in the Scene_Demo_MAIN.

Root Bone

The animations use the 'root' bone to ensure easy alignment of the character.
